Education

Vellore Institute of Technology — Chennai, Tamil Nadu
B.Tech in Electronics and Computer Engineering — *Aug. 2023 – July 2027*

- **CGPA:** 9.08/10.0

Technical Skills

Languages: C, C++, Java, Python, JavaScript, SQL, HTML, CSS
Frameworks & Tools: Node.js, Express, React.js, PHP, MySQL, MongoDB
Knows to work with: Linux, Git, APIs, AI-assisted Development
Coursework: DSA, OOPS, OS, DBMS, AWS, Computer Networks, AIML, Deep Learning

Experience

Techzeeb — Coimbatore, Tamil Nadu
SOFTWARE ENGINEERING INTERN — *May 2025 – August 2025*

- Developed client-facing web application modules using the PHP-SQL stack, translating product requirements into maintainable software in collaboration with product managers.
- Refactored backend APIs and optimized MySQL queries to improve application response latency
- Debugged and resolved 20+ application issues across client-facing modules, improving reliability through systematic testing and code review.

VITeach Club — VIT University, Chennai
VICE CHAIRPERSON — *August 2025 – July 2026*

- Coordinate operations and technical initiatives for a 186 member organization, working across teams to plan and execute large-scale activities and outreach missions.
- Led cross-functional teams, driving structured problem-solving, clear communication, and timely execution of club initiatives.

Projects

Event-Driven Automation Platform | *AWS, Node.js, React.js, DynamoDB* — July 2025

- Built and deployed an IFTTT-style automation platform enabling users to define event-driven workflows with webhook, scheduled, and manual triggers and configurable email/webhook actions.
- Architected a serverless backend using AWS Lambda, API Gateway, DynamoDB, and EventBridge, separating workflow management, event ingestion, scheduled execution, and action processing into independent services.

Taskbar Auto-Hide Toggle | *C++17, Windows API, CMake* — September 2026

- Developed a lightweight Windows utility in C++17 that toggles taskbar auto-hide state through the Windows Shell API without requiring a persistent background process.
- Implemented system-state querying and updates using `SHAppBarMessage()` with `ABM_GETSTATE` and `ABM_SETSTATE`, producing a minimal GUI executable with immediate process termination.

University Health Center App | *React Native, Supabase, PostgreSQL* — April 2026

- Designed a role-based health coordination platform for parents, doctors, and wardens, enabling controlled access to hospitalization data and automated escalation workflows.
- Developed analytics dashboards to monitor hospitalization activity and support timely coordination between stakeholders.

Achievements And Certifications

Second Runners-Up – Solveathon '26 Hackathon — March 2026
VIT University, Chennai

The Web Developer Bootcamp Certification — April 2025
Udemy – Colt Steele
